# Stock status report: the field “Current Stock (Weeks)” is blank

On the stock status report, a table shows the current stock per item (in doses / pieces) and also a calculation of:

- The current stock (in number of weeks)
- The current stock (in number of weeks) adjusted by expiry date
- The date when the stock is expected to end

In some cases, these 3 calculations might be blank.

| Product Name | Current Stock (Doses/Units) | Current Stock (Weeks) | First Expiry | Adjusted Weeks of Stock | Anticipated End Of Stock |
|---|---|---|---|---|---|
| BCG | 3,931,560 | 44 | 28 Feb 2023 | 0 | 11 Oct 2023 |
| BCG (SIA) | 5,210 | | 30 Jun 2023 | | |
| bOPV | 3,525,000 | 106.3 | 07 Feb 2023 | 71 | 19 Feb 2025 |

If these data points are blank on the table, the data will also be missing from the stock status bar chart.

If you encounter this situation, verify the following:

- The vaccines or supplies for which you have generated the report, are registered as products for routine immunization. **For supplementary activity items, number of weeks of stock and anticipated end of stock are not calculated.**

- The item has been registered on the list of routine immunization products under the program Data for the current year. If you have administrator rights, review the list of the “Program Data” tab, otherwise, request support from your SMT administrator.

- The population data for your store and target groups percentage is completed. If you have administrator rights, review the tables under the “Store Data” > “Population & Demographics” tab, otherwise, request support from your SMT administrator.

- The expected vaccine coverage for all items and supply chain levels is completed. If you have administrator rights, review the tables under the “Store Data” > “Vaccine coverage” tab, otherwise, request support from your SMT administrator.
