Master data. The producer is not on the list

When creating a new country specific vaccine or supply in your master list, you will be required to enter the details of the item, including the producer/manufacturer.

If the producer/manufacturer is not listed on the dropdown menu, you will need to manually add it as a new country specific producer **before** adding any vaccines or supplies associated to it. Refer to section 4.1.2. Adding country specific items to the national master data of the SMT User Guide for a detailed description of this process.
