Primero Guidance on Federating to B2C

There are 2 types of processes we follow to set up single-sign on with partners. The first process is for partners' who have a Google underlying identity provider. The second process is for non-Google providers, such as Entra ID (formerly Azure Active Directory).

This guidance outlines the process for partners who use Entra ID.

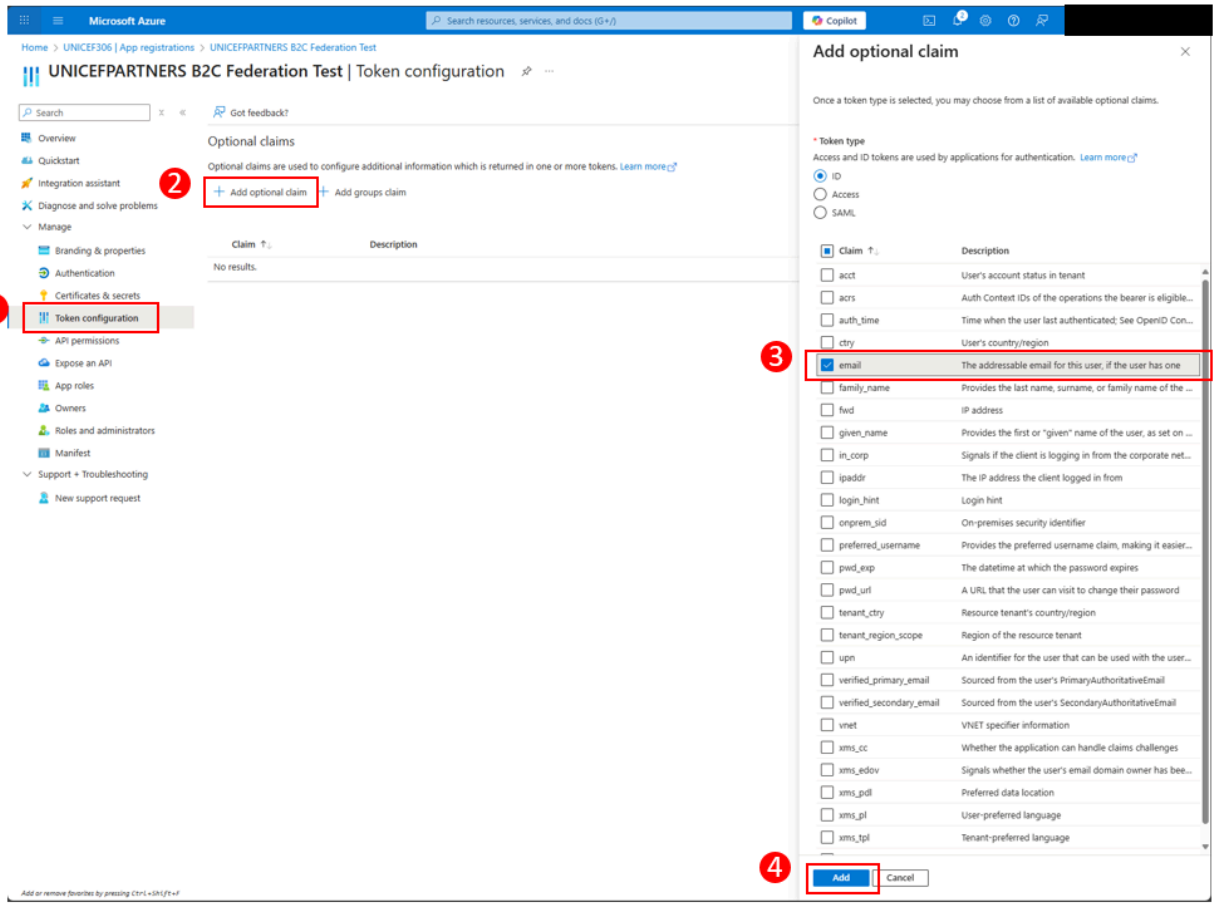
Step 1:

The partner IT focal point must review and complete instructions outlined here: Set up sign-in for a Microsoft Entra organization - Azure AD B2C | Microsoft Learn

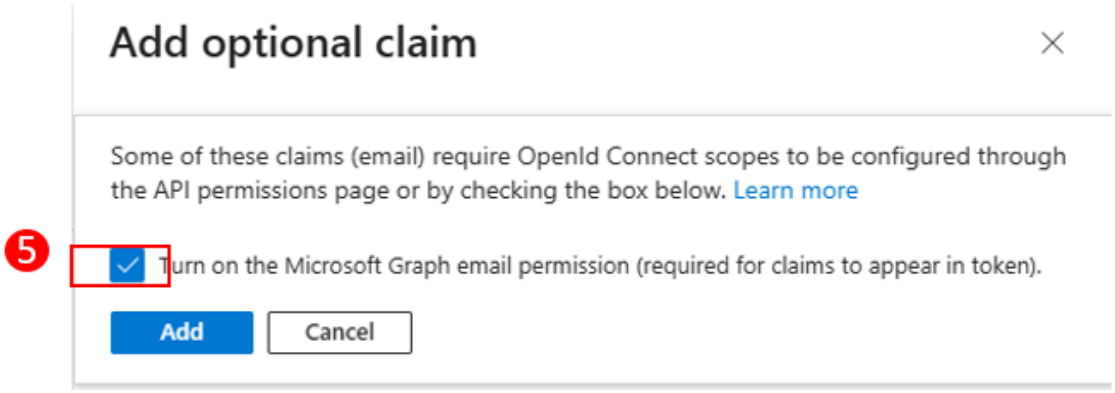
The URL to be used is
https://unicefpartners.b2clogin.com/unicefpartners.onmicrosoft.com/oauth2/authresp

In order to add the email claim into your app registration please follow the below steps:

1) Select "Token Configuration"
2) Add optional claim
3) Select "email"
4) Select "Add"



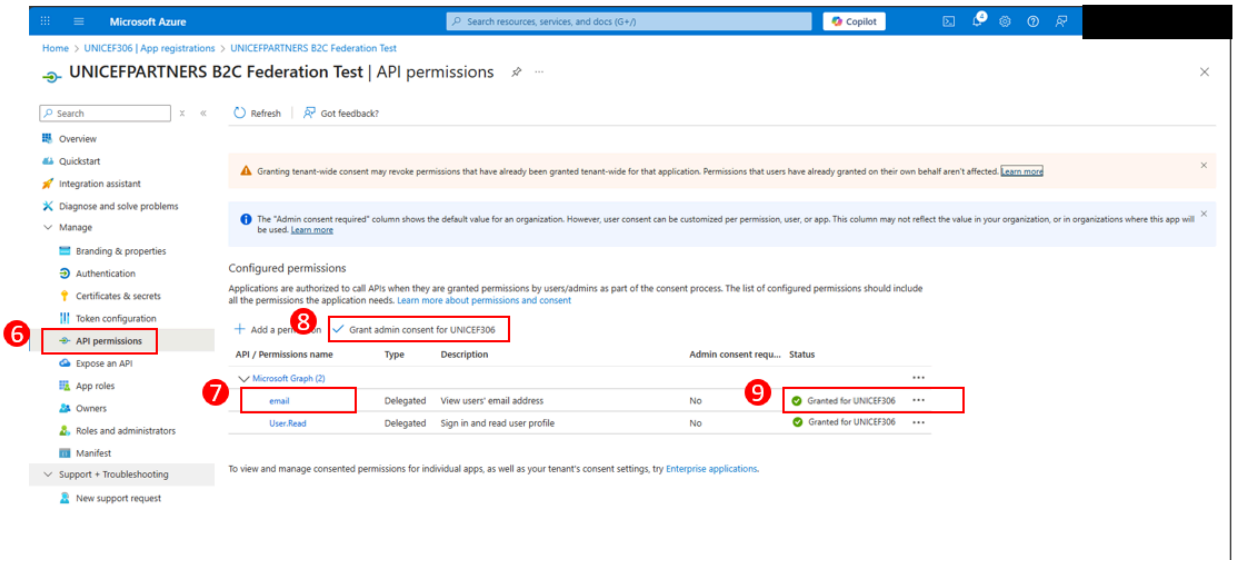
Once you select add, please select “Turn on the Microsoft Graph email permission…”



Once added then:

6) Go to “API permissions”
7) Select email
8) Grant admin consent for your organization

9) Verify email has been granted access



Step 2:

The partner must share credentials via OneDrive or through a safe data transfer method of their choosing with jpanchalingam@unicef.org only.

Step 3:

UNICEF ICTD will provide a test link. If any issues arise during testing then further debugging will be scheduled over a call with UNICEF ICTD (based in Valencia, Spain)
