

## Invalid date when trying to issue out supplies

When issuing out supplies, it is possible to select an *Issue Date* in the past. This is to allow users to register transactions that have already been completed, but were not recorded in the SMT at the time.

The screenshot shows a web form titled "Issue New Stock". The form has several fields: "Issue Type" with a dropdown menu set to "Requisition"; "Issue Date" with a text input field containing "01-09-2023" and a calendar icon; "Recipient Store / Reason" with a dropdown menu set to "Region 07"; "Distributed Late" with a dropdown menu set to "No"; and "International Shipping Ref" with a text input field. The "Issue Date" field is highlighted with an orange border.

However, it is possible that when selecting an *Issue Date* in the past, the transaction cannot be completed and a message like this will appear:

This error message is triggered when the selected *Issue Date* for a specific product and batch is earlier than the *Arrival Date* of that specific product and batch in the vaccine store (i.e. the user is trying to issue stock at a time when that item was not in store). For example:

- BCG vaccine batch 987368, arrival in central store 18<sup>th</sup> June
- BCG vaccine batch 987368, issue date from central store before 18<sup>th</sup> June -> **invalid**
- BCG vaccine batch 987368, issue date from central store 18<sup>th</sup> June or later -> **valid**

If you see the error message above, review the arrival and issuing dates of the item(s) to ensure the transaction gets registered on the correct dates.
